cargo_box 3/8 in softwood plywood — unfolded to sheets

1 sheet(s) of softwood plywood 8 x 4 ft, 3/8 in softwood plywood

Units	mm — stated by you, not read from the file
Scale	1x
Model size	1016 x 1956 x 0.0 mm
Triangles	2
Pieces	1 (from 1 patches, 0 split to fit)
Seams	0, total 0.0 mm
Sheets	1, 66.8% used, 0.33 sheets' worth of waste
Usable area	2401 x 1182 mm of a 2438 x 1219 sheet
Worst distortion	0.000 mm on any one edge (0.00% of the longest dimension)
Joints	butt joints — the material does not fold

What this does not tell you

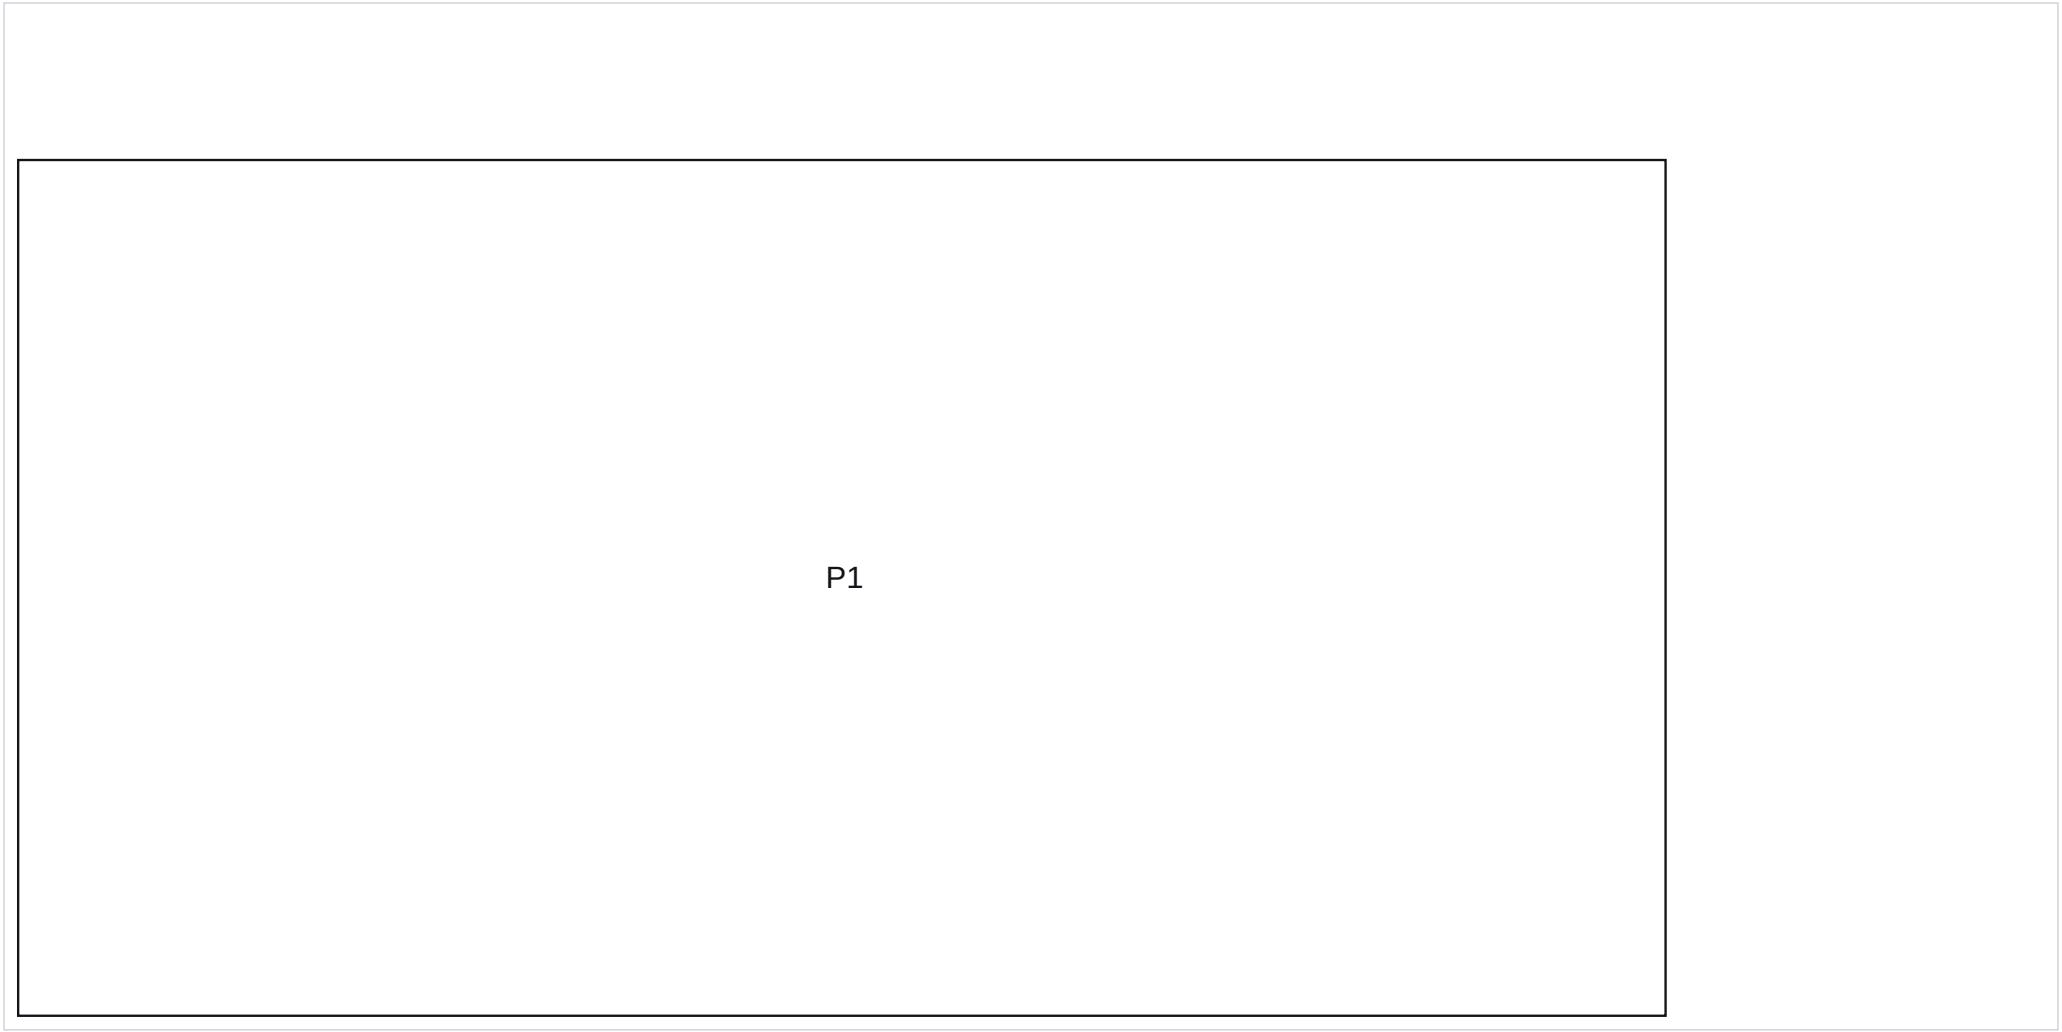
Every sheet here is the same thickness, so a sheet count at one scale and a sheet count at another compare different objects built from the same stock. As a measure of packing it is exact. As a comparison of cost between sizes it is not.

Every piece was placed on a sheet.

Sheet 1 of 1 — softwood plywood 8 x 4 ft

1 pieces: P1

REDUCED TO 11.1% TO FIT THIS PAGE — do not cut from this print. Check the bar below.



200 mm — if this bar is not 200 mm the page has been rescaled

- cut
- mountain fold — crease towards you, panels away
- valley fold — crease away, panels towards you
- seam token

Marked side faces OUT; mountain and valley are named as seen from it. Glue tabs fold under, to the inside. This is an open surface, so which face is out comes from the model's own winding and cannot be checked — a bowl and a dome are the same triangles. If it is inverted, every fold is inverted together: hold one panel against the model before creasing the rest.

Assembly — seam list (1)

Each token appears on exactly two pieces. Glue or butt those two edges together. The fold angle is the angle the surface turns through at that seam. On the sheets a mountain is drawn dash-dot and a valley plain dashed. Marked side faces OUT; mountain and valley are named as seen from it. Glue tabs fold under, to the inside. This is an open surface, so which face is out comes from the model's own winding and cannot be checked — a bowl and a dome are the same triangles. If it is inverted, every fold is inverted together: hold one panel against the model before creasing the rest.
