cargo_box 1 in XPS foam board — unfolded to sheets

4 sheet(s) of XPS foam board 8 x 4 ft, 1 in XPS foam board

Units	mm — stated by you, not read from the file
Scale	1x
Model size	1016 x 1956 x 1032 mm
Triangles	584
Pieces	21 (from 21 patches, 0 split to fit)
Seams	256, total 17604 mm
Sheets	4, 59.0% used, 1.64 sheets' worth of waste
Usable area	2414 x 1194 mm of a 2438 x 1219 sheet
Worst distortion	0.000 mm on any one edge (0.00% of the longest dimension)
Joints	butt joints — the material does not fold

What this does not tell you

Every sheet here is the same thickness, so a sheet count at one scale and a sheet count at another compare different objects built from the same stock. As a measure of packing it is exact. As a comparison of cost between sizes it is not.

Every piece was placed on a sheet.

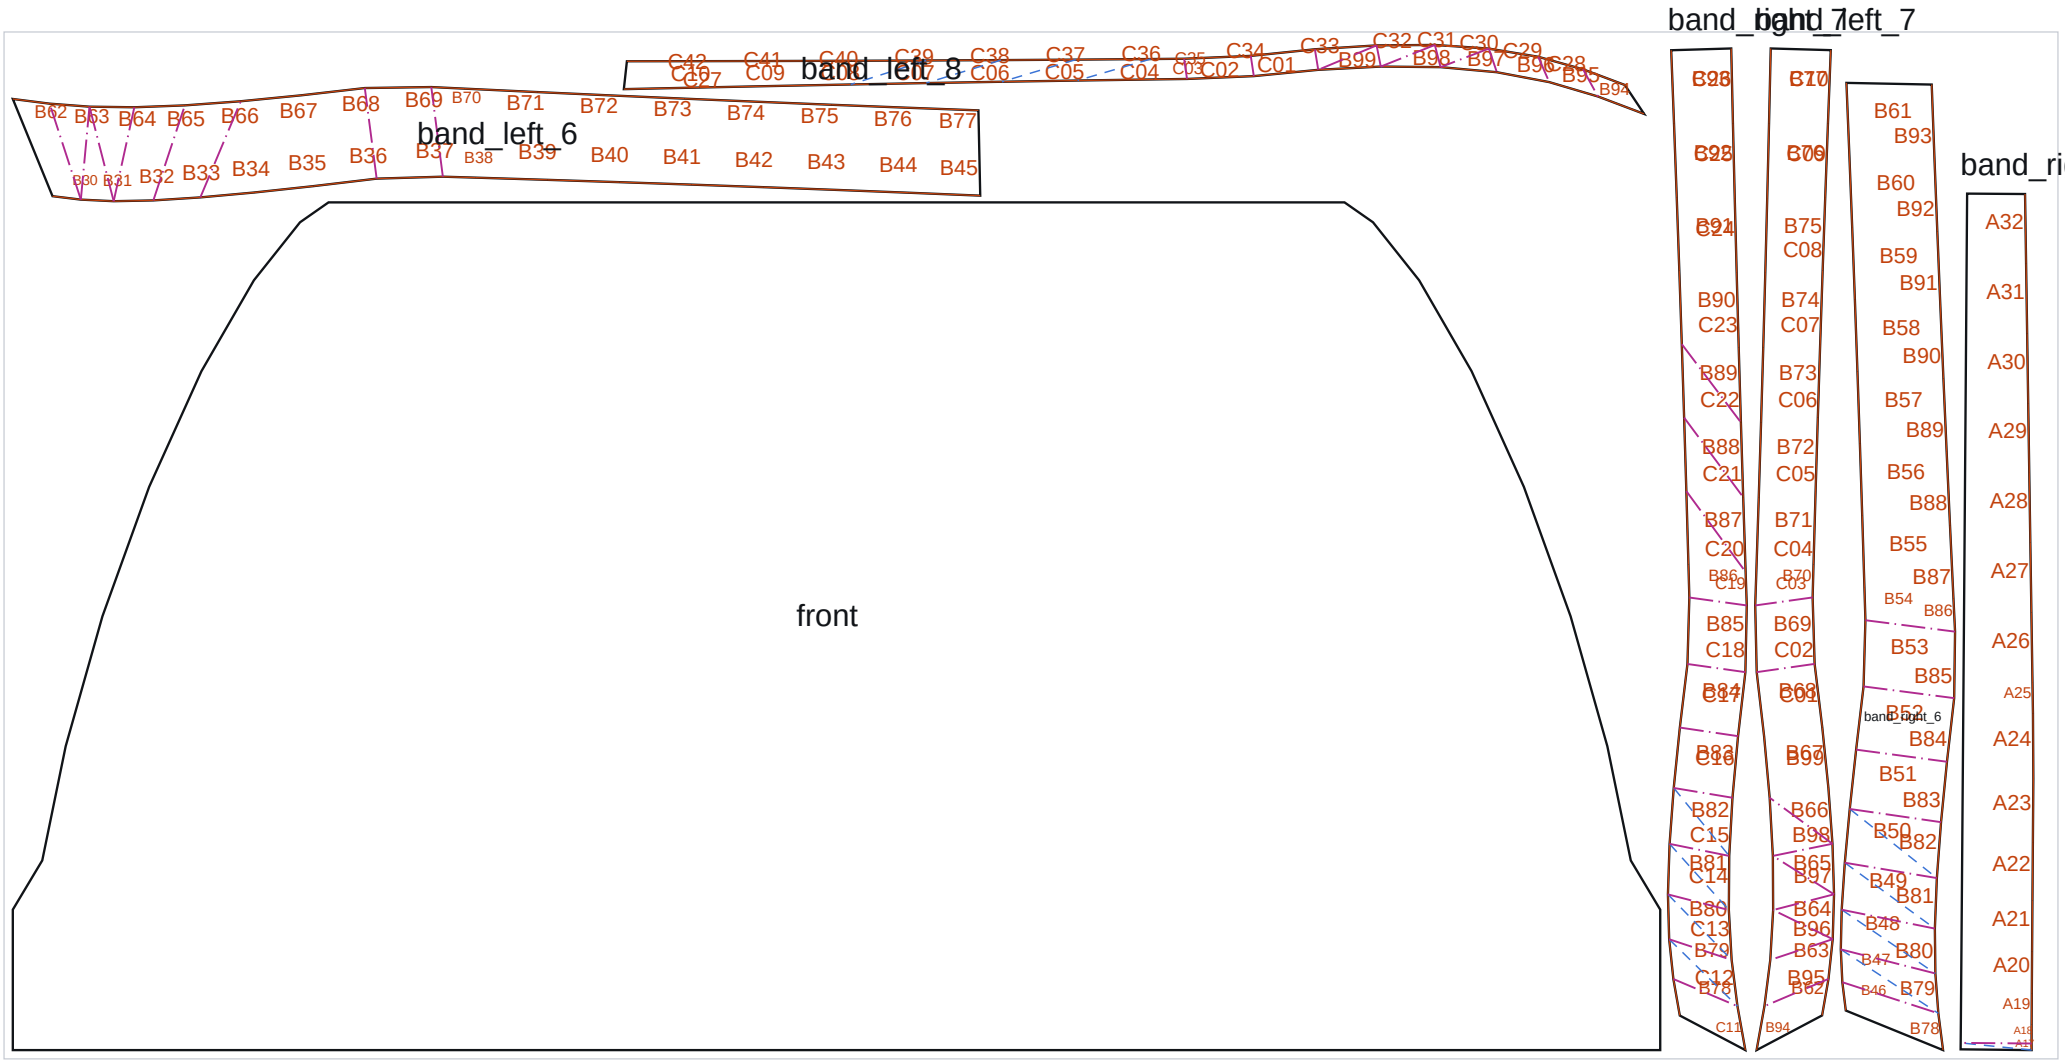

3 label(s) could not be written inside their piece

band_right_7: name — no room inside the piece; written just outside it
band_left_7: name — no room inside the piece; written just outside it
band_right_1: name — no room inside the piece; written just outside it

Sheet 1 of 4 — XPS foam board 8 x 4 ft

7 pieces: front, band_right_7, band_left_7, band_right_6, band_left_6, band_left_8, band_right_1

200 mm — if this bar is not 200 mm the page has been rescaled

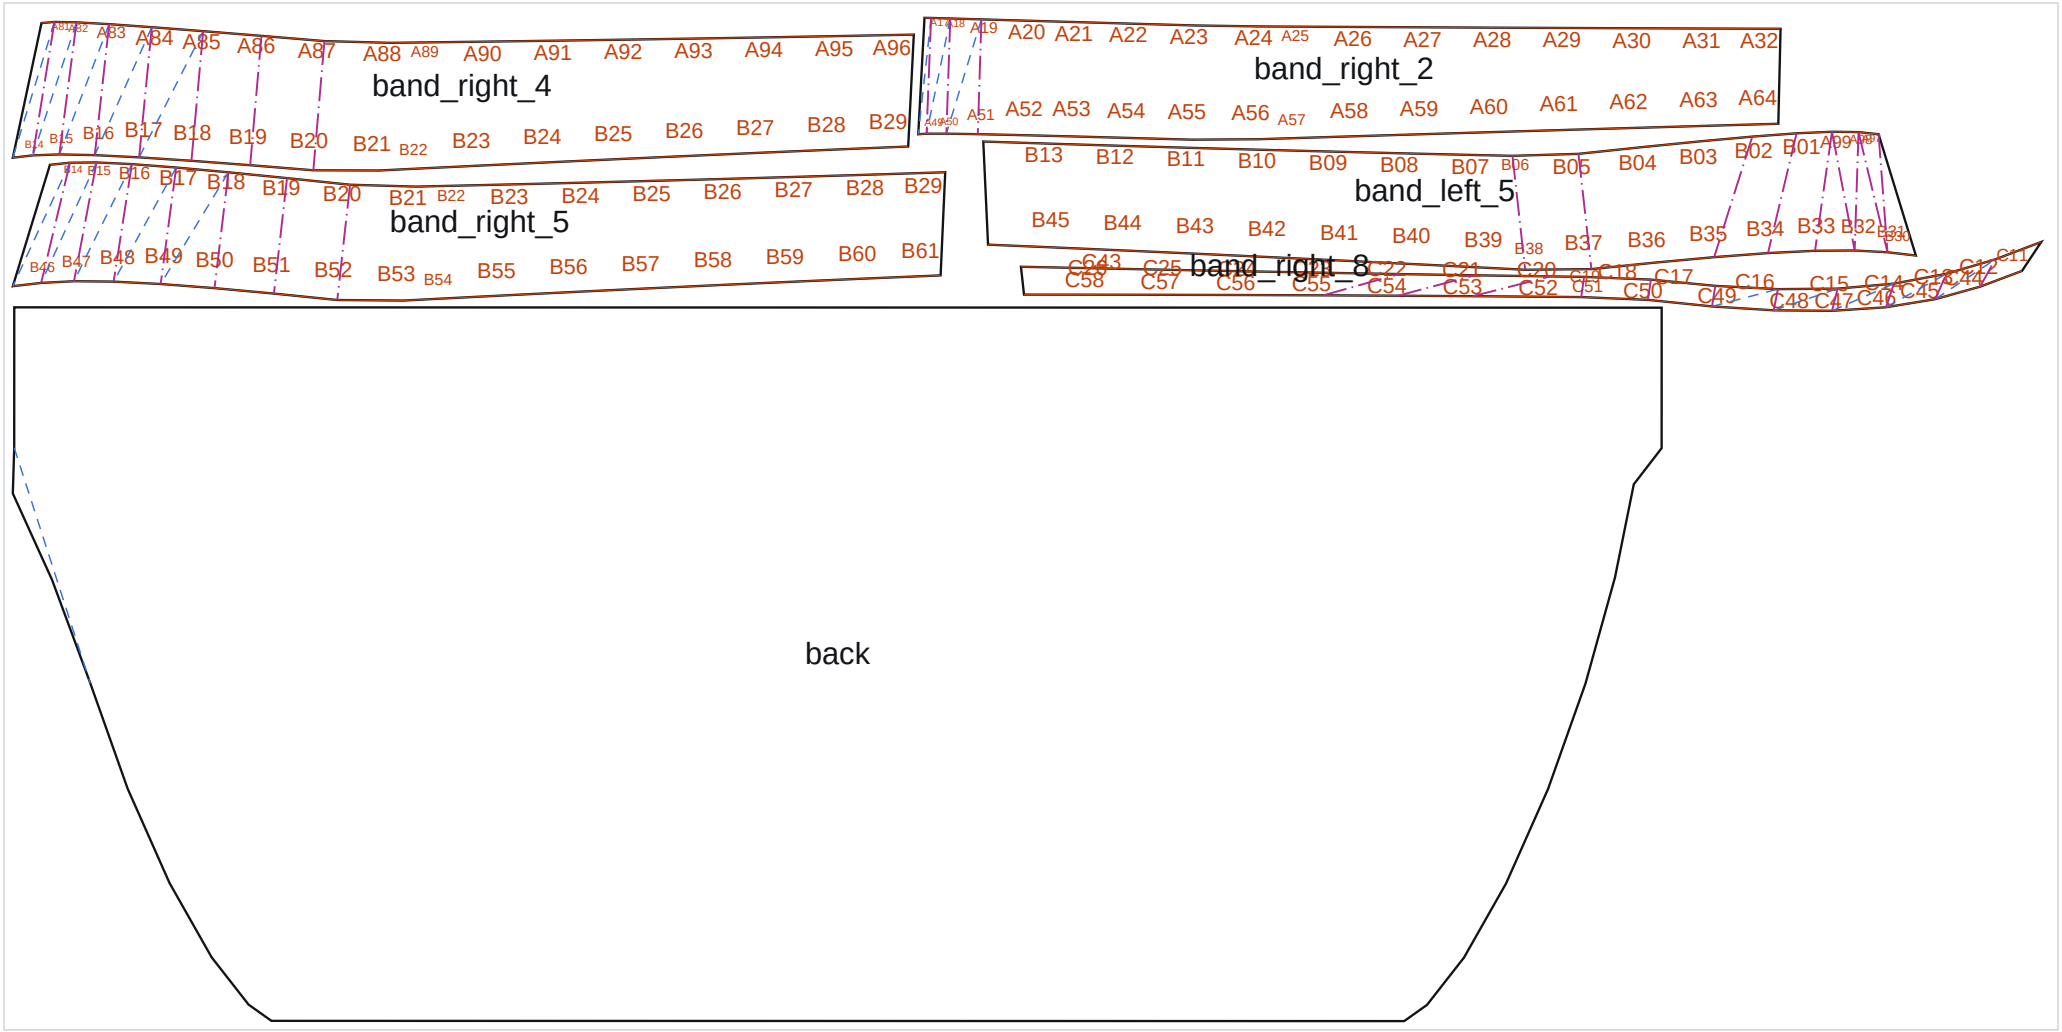

- cut
- mountain fold — crease towards you, panels away
- valley fold — crease away, panels towards you
- seam token

Marked side faces OUT; mountain and valley are named as seen from it. Glue tabs fold under, to the inside. This is an open surface, so which face is out comes from the model's own winding and cannot be checked — a bowl and a dome are the same triangles. If it is inverted, every fold is inverted together: hold one panel against the model before creasing the rest.

Sheet 2 of 4 — XPS foam board 8 x 4 ft

6 pieces: back, band_right_8, band_right_5, band_left_5, band_right_4, band_right_2

REDUCED TO 11.1% TO FIT THIS PAGE — do not cut from this print. Check the bar below.

If it is inverted, every fold is inverted together: hold one panel against the model before creasing the rest.

Assembly — seam list (1)

Each token appears on exactly two pieces. Glue or butt those two edges together. The fold angle is the angle the surface turns through at that seam. On the sheets a mountain is drawn dash-dot and a valley plain dashed. Marked side faces OUT; mountain and valley are named as seen from it. Glue tabs fold under, to the inside. This is an open surface, so which face is out comes from the model's own winding and cannot be checked — a bowl and a dome are the same triangles. If it is inverted, every fold is inverted together: hold one panel against the model before creasing the rest.

Assembly — seam list (7)

Each token appears on exactly two pieces. Glue or butt those two edges together. The fold angle is the angle the surface turns through at that seam. On the sheets a mountain is drawn dash-dot and a valley plain dashed. Marked side faces OUT; mountain and valley are named as seen from it. Glue tabs fold under, to the inside. This is an open surface, so which face is out comes from the model's own winding and cannot be checked — a bowl and a dome are the same triangles. If it is inverted, every fold is inverted together: hold one panel against the model before creasing the rest.

Token	Joins	Length	Fold
C31	band_left_8 — roof	71.0 mm	64 deg mountain
C32	band_left_8 — roof	74.4 mm	69 deg mountain
C33	band_left_8 — roof	76.9 mm	73 deg mountain
C34	band_left_8 — roof	79.4 mm	76 deg mountain
C35	band_left_8 — roof	40.2 mm	71 deg mountain
C36	band_left_8 — roof	89.8 mm	68 deg mountain
C37	band_left_8 — roof	89.8 mm	62 deg mountain
C38	band_left_8 — roof	89.8 mm	56 deg mountain
C39	band_left_8 — roof	89.8 mm	51 deg mountain
C40	band_left_8 — roof	89.8 mm	46 deg mountain
C41	band_left_8 — roof	89.8 mm	42 deg mountain
C42	band_left_8 — roof	89.8 mm	38 deg mountain
C43	band_right_8 — roof	58.6 mm	81 deg mountain
C44	band_right_8 — roof	60.3 mm	70 deg mountain
C45	band_right_8 — roof	63.3 mm	66 deg mountain
C46	band_right_8 — roof	67.1 mm	67 deg mountain
C47	band_right_8 — roof	71.0 mm	70 deg mountain
C48	band_right_8 — roof	74.4 mm	74 deg mountain
C49	band_right_8 — roof	76.9 mm	77 deg mountain
C50	band_right_8 — roof	79.4 mm	73 deg mountain
C51	band_right_8 — roof	40.2 mm	68 deg mountain
C52	band_right_8 — roof	89.8 mm	62 deg mountain
C53	band_right_8 — roof	89.8 mm	56 deg mountain
